

Integrated Point of Sale System (iPOSS)

Introduction

iSeries Till Solution

XKS has developed its own brand of thin client EPoS system with a real-time connection to the back office server – iSeries / AS400

The iSeries / AS400 platform is synonymous with security, reliability and robustness.

Benefits to your Business

- Cost effective solution
- Works in real-time – changes take place immediately
- Designed for expansion – no limitations on terminal or barcode numbers
- Can easily be modified to suit customers need & requirements
- Information easily interrogated – via database query, Excel, etc
- Integrates with other systems – UNIX, NT, Windows, etc
- Reduces processing from central systems
- Trickle-feeding – allowing nightly or daily scheduled transfer of data
- Manage stock levels either centrally or from individual stores
- Store managed ordering resulting in more accurate stock levels
- Developed by company who specialise in retail and IT

PoS Features

- Configure site, selling point, operator and supervisor details
- Sales transaction – by product or barcode
- Cancel transaction – if customer cannot / will not pay
- Reprint receipt – in case of any errors
- Refund of transaction – if goods returned
- Layaway – suspend transaction and serve another customer
- Product price enquiry / search
- End of day reports – total sales by selling point and site

Back Office Features

- Product database – product, barcode, description, price
- Supplier database – supplier and links to products they supply
- Stock transaction database – goods receipt, sales, stock adjustment
- Finance interfaces (customised for each customer)

Optional Features

- Integrated Credit/Debit card module
- Manage product, barcode, colour and size
- Promotion management
- Stock Counting
- Barcode Label printing
- Purchase Ordering

Back Office Server

The EPoS software would be run on the iSeries / AS400 system, which comes with a built-in operation system (i5/OS), database (DB2 Universal database), modern application development tools and web application server

The EPoS software provides all the standard features required to support the PoS transaction; end of day functions; and back office analysis

POS PC

Small form factor PC running Windows XP professional and upwards with monitor, keyboard, mouse, and connections for network interface and other PoS components

Barcode Scanner

Hand held laser barcode scanner with keyboard wedge connection to the PoS PC. Scanner has 2m long cable

Thermal Receipt Printer

The thermal receipt printer is in a small and compact form and capable of printing 40 lines per second. It cuts the paper automatically once the receipt has been printed. It has a large 90mm (outside diameter) paper roll capacity

It connects to the PoS PC using a serial or USB connection

Cash Drawer

Standard robust retail cash drawer, with note and coin compartments

Connects to thermal receipt printer, leaving PoS PC with spare connections

Optional Chip&Pin pad

Range of chip&pin pads can be used – e.g. Verifone; Secura
